PROFILE SUMMARY

Computer Science student and DevOps Engineer with hands-on experience orchestrating infrastructure via Docker and Kubernetes, and implementing scalable CI/CD pipelines. Proficient in integrating strict DevSecOps practices and GitOps workflows to automate and secure application delivery.

EDUCATION

Lakshmi Narain College of Technology

Bhopal, Madhya Pradesh

Bachelor of Technology in Computer Science and Engineering (AIML)

2024 – 2028

TECHNICAL SKILLS AND TOOLS

Languages and Frameworks: Python, Bash Scripting, Django, Django REST Framework (DRF)

Cloud Infrastructure & CI/CD: AWS EC2, Docker, Kubernetes, Helm, Jenkins, ArgoCD, Linux, Git

Security & Observability: Prometheus, Grafana, SonarQube, Trivy, OWASP Dependency Check

PROJECTS

Lost-and-Found: Full-Stack Application & Infrastructure | *Django, Python, Docker, EC2*

Oct 2025 – Nov 2025

- Developed a full-stack Django and Django DRF web application, managing the backend architecture, data models, and REST APIs.
- Packaged the application using multi-stage Docker builds and managed AWS EC2 deployments via Docker Compose.

GitOps & DevSecOps Pipeline Automation | *Kubernetes, Helm, Jenkins, ArgoCD*

April 2026 – May 2026

- Migrated deployments for two full-stack applications (GiftHaven, MERN-Ecommerce) to a GitOps workflow.
- Created a custom Jenkins Shared Library in Groovy to reuse CI/CD pipeline logic and standardize builds across different repositories.
- Integrated Trivy, OWASP dependency checks, and SonarQube directly into the CI pipeline to automate security and code quality gates.
- Converted static Kubernetes manifests into dynamic Helm charts to align with industry best practices and enable seamless ArgoCD integration.
- Automated Kubernetes deployments using ArgoCD Image Updater and configured real-time sync alerts via ArgoCD Notifications.
- Deployed Prometheus and Grafana for continuous cluster monitoring, visualizing resource utilization and application health metrics via custom dashboards.
- Reduced manual deployment and pipeline debugging time by over 65% (from 6+ hours to under 2 hours per release)

ACHIEVEMENTS

- Competed in the Oriented TechHack 2.0 National Hackathon alongside 200 teams, successfully engineering and deploying the initial GiftHaven application infrastructure under strict time constraints (April 2026)
